

Technology Stack

Date	
Team Id	SWTID-2026-8336
Project Name	Optimizing User, Group, and Role Management with Access Control and Workflows
Maximum Marks	

Technology Stack Architecture :

The project is built entirely on the ServiceNow platform, where users interact with forms and catalog items to submit access requests or perform administrative tasks. These requests are processed through Flow Designer, which automates approvals, notifications, and task routing. JavaScript is used to implement business logic and customize system behavior where required. Security is enforced through Role-Based Access Control (RBAC) and Access Control Lists (ACLs), ensuring that users can access only the resources authorized for their roles. All information, including user records, group memberships, workflow details, and audit logs, is securely stored in ServiceNow database tables, while notifications keep users informed throughout the workflow process.

Technology Stack:

Layer	Technology
Platform	ServiceNow
Programming	JavaScript (Server-side & Client-side)
Workflow Automation	Flow Designer
Security	Access Control Lists (ACLs)
Access Management	Role-Based Access Control (RBAC)
Database	ServiceNow Tables
Forms & UI	ServiceNow Forms and Workspace
Notifications	Email Notifications
Development Environment	ServiceNow Studio
