

Proposed Solution

Date	
Team Id	SWTID-2026-8336
Project Name	Optimizing User, Group, and Role Management with Access Control and Workflows
Maximum Marks	

Proposed Solution:

This proposed solution integrates **automation, security, and structured access control** using ServiceNow capabilities. It ensures efficient user management, secure role assignment, and streamlined approval workflows while reducing manual intervention and improving system governance.

Component	Description	Purpose / Benefit
ServiceNow Platform	Cloud-based ITSM platform used to build and deploy the application.	Provides a centralized system for managing users, groups, roles, and workflows.
User Management Module	Handles creation, update, and deletion of user accounts.	Ensures proper lifecycle management of users in the system.
Group Management	Organizes users into groups based on roles or departments.	Simplifies permission assignment and improves administrative efficiency.
Role Management (RBAC)	Assigns permissions based on user roles.	Ensures users get only required access, improving security.
Access Control Lists (ACLs)	Defines rules to control access to data and system components.	Prevents unauthorized access to sensitive information.
Flow Designer	Automates business processes like access requests and approvals.	Reduces manual effort and speeds up workflow processing.

Proposed Solution

Component	Description	Purpose / Benefit
Approval Workflow	Routes access requests to managers for approval.	Ensures proper validation before granting access.
Notifications	Sends updates to users and managers about request status.	Improves transparency and communication.
Audit Logs	Tracks all system activities and changes.	Ensures compliance, monitoring, and accountability.
ServiceNow Database Tables	Stores user, role, group, and workflow data securely.	Maintains structured and secure data storage.
