Conclusion :

The **Optimizing User, Group, and Role Management with Access Control and Workflows** project successfully achieves its objective of building a secure, automated, and efficient access management system using the ServiceNow platform.

The system integrates user management, group management, role-based access control, ACL security, and workflow automation into a unified solution. It significantly reduces manual workload, improves approval speed, and enhances security and governance within the organization.

By implementing Flow Designer for automation and RBAC with ACL for security, the system ensures that only authorized users have access to appropriate resources. The project demonstrates scalability, reliability, and efficiency, making it suitable for enterprise-level deployment.

Overall, the project provides a complete solution for modern access management challenges by combining automation, security, and centralized control.
