RESULT:

The results section represents the final output of the **Optimizing User, Group, and Role Management with Access Control and Workflows** project. The system successfully demonstrates secure user management, automated workflows, and efficient role-based access control using the ServiceNow platform.

The application was tested for all major functionalities including user login, access request submission, approval workflow execution, role assignment, and access control enforcement. All modules worked as expected, and the system successfully reduced manual intervention while improving operational efficiency.

The final system ensures that users receive appropriate access based on their roles, and all requests are processed through automated workflows, ensuring transparency and security.
